User Account Control

User Account Control is a dialog box that pops up anytime a new program is installed or there is a change to settings on the users computer. It is an fairly intrusive security feature also known as “Interrupt Your Work”. The purpose is to make an user aware of potential spyware and viruses that could install themselves without the user knowing it. The following is an example of the dialog:

The user will click on the Yes button to accept. The next box is an authentication verification diaglog and the screen will go black, this is to prevent evil software from tricking the user by displaying a fake dialog box. The user needs to press “Ctrl, Alt and Delete”.
If this User Account Control dialog box opens on its own, a user will be immediately alerted that something evil may be planned. This is an example:

The user can change the UAC interruptions through the following window:
