Importing Pictures

Plug the camera into the computer using a USB port. Windows 7 will recognize the device and open up the appropriate AutoPlan dialog box as shown below:

Click on “Import pictures and videos using Windows” under Picture Options. The following dialog box opens

The user can choose to import the pictures as a one big load or group them. If there are multiple topics, click on the “Import Settings” link to make the necessary groups.
Once the pictures are imported the Library opens up to the folder, the user just created. Click on
the photo to change the name if desired.
